COMPUTER SCIENCE STUDENT HACKATHON

3rd MARCH 2026 09:00 – 19:00

WELCOME – STAFF AND SCHEDULE

SERENGUL SMITH

KELLY ANDROUTSOPOULOS

MICHAEL HEENEY

WELCOME – STAFF AND SCHEDULE

Time	Title	Description	Room
09:00 – 09:30	Arrival and Registration	Students check in, get name tags and available briefs	RG08
09:30 – 10:00	Opening and Briefing to Teams	Welcome talk, problem statements, judging criteria	RG08
10:00 – 12:30	Session 1	Working in teams	R110 & R209
12:30 – 13:00	Lunch Break for All (Not funded)	At your own expense (rooms open to continue working)	R110 & R209
13:00 – 16:30	Session 2	Working in teams	R110 & R209
16:30 – 17:30	Submission and Panel Review	Students to submit work and panel review/mark	R110 & R209
17:30 – 18:00	Pizza and Networking (Funded)	Pizza funded by faculty while panel selects top four teams	R209
18:00 – 19:00	Final Pitches and Voting	10-minute pitches by each team and panel + public vote	RG08
19:00 - Close	Awards and Closing Remarks	Photos, prizes and certificates	RG08

TEAMS

Team 1	Team 2	Team 3	Team 4	Team 5	Team 6
Alex-Petrisor Bejenaru	Mohammed Sheekh-Amin	Kadam Jadav	Khizer Ahmed Durrani	Ayushi Yadav	Kamil Gzyl
Dominik Wujek	Amin Mubarek	Masa Jovanovic	Farzan Ahmed Hossain	Duha Kasim	Ritesh Sachania
Przemek Wasinski	Muhammad Waleed Aamir	Rela Telaviya	Amine Bennacer	Courtney Bienvenue	Noeyal Batolar

Team 7	Team 8	Team 9	Team 10	Team 11	Team 12
Rudraa Patel	Shariff Goow	Chisom Stanley	Deeban Boominathan	Hetvi SanjayKumar Ahir	
Bhavya Patel	Eduard Cojocaru	Elenasulu Arinze	Kamalesh Rajasekaran	Harshitaben farshukumar patel	
Noopur Patel	Dean Nathaniel Idia Cimatu	Divine Collins	Selosmith Lowrance	Happy hiteshbhai pansuriya	

“SMART CAMPUS OF THE FUTURE”

BRIEF 1

	Brief Idea	Extension
1	**Smart Navigation: Our campus is large, confusing and inefficient to move around. Help!**	
	An application to help students navigate the Middlesex campus. This could be using different technologies or APIs to track and move around the campus efficiently. This should allow students to navigate the campus from class to class smoothly (with the quickest path for them). This could include: *Indoor navigation system of larger buildings, accessibility options, timetable awareness for route planning, empty classroom study space finder.*	Understanding of users and traffic control (AI/ML), predictive movement modelling, emegenecy re-routing (for firealarms, police calls etc)

BRIEF 2

	Brief Idea	Extension
2	**Student Life Assistant: When struggling with organisation, wellbeing and engagement...** An application for students to track their own studies, add deadlines, meetings, classes and timetables to ensure they are able to keep upto date with the daily and future tasks. Students should be able to add other aspects of their life to their timetable and ensure when they have completed certain deadlines. The tool should seek to help students with their engagement on campus but also at home. *Chatbot for campus support, deadline tracker and risk alerts, personalised study planner, mental health and wellbeing checks with support information etc.*	Integration with LLMs if using ChatBot features and if not going to be too primitive, voice integration, predicting academic risk.

BRIEF 3

	Brief Idea	Extension
3	**Safety and Security on Campus: Proactive and Intelligent Safety Systems** An application to authenticate students on campus. Currently to access your labs, you are using your ID cards, create a system to ensure the right people are entering the labs - This could be using facial recognition or any other method of verification you think suitable (or multiple!). This app should be able to contact security and keep them in-the-loop about building usage. The application could also give indicators to total users people in the building and understand when people enter and leave. *Smart ID verification system, suspicious behaviour alerts and detection, safe and at night route planning, alarms and panic options.*	AI anomaly detection, lockdown options, predictive safety analytics...

BRIEF 4

	Brief Idea	Extension
4	**Conceptual: Sustainability**	
	For students not wanting to create a system with code...We would like you to design and create an evaluation for monitoring the resources used at the University. Being a prototype, we would like you to create personas and scenarios for your system, allowing us to understand the use cases of your system along with the designs themselves. If there are parts you do want to develop, this would be a nice addition to your demonstration. You should use an app such as Figma or something similar to do the UI for this.	
	Building energy usage dashboard, smart classroom power control system, room occupancy optimisation, solar production tracking (Hatchcroft for example), smart recycling and anything else you could think of!	Integration with IOT sensor network, predictive energy usage...

WITH ALL IDEAS…

- Add features we haven't thought of! They are just generic!
- Start with a plan…
  - Start small
  - Build it up
  - Show us in your presentation!
- Who's doing what?
  - How will each person start?
  - What are people's strengths?
- How will you meet the deliverables?
- Make sure there is equal contributions and all speak in the presentations!
- Talk to other teams, this is a social event…*sort of* :)

PRIZES, FOOD AND REFRESHMENTS

- Glory! :)
- £150 Amazon vouchers for the top team
  - £50 each
- Lunch is at 12:30
  - Not funded. But feel free to work in the labs!
- Refreshments and Food
  - R209 – 10:00am Tea, coffee, water and cookies
    - Please refill your water on the ground floor!
  - R209 – 17:30pm (ish) Dominos Pizza

DELIVERABLES

- A working prototype
  - You can pick how it's deployed
  - You can pick the languages you use
  - You can use AI
    - But you will be expected to talk about your code and what it does! So be careful…
- Documentation/presentation
  - The story of A -> B
    - From sketches, to designs, to iterations…show us!
  - Architecture diagrams
  - Data flow explanations
  - Ethical and security considerations

MARKING

- Problem Definition and Vision (15 Marks)
- Technical Implementation (25 Marks)
- Innovation and Creativity (15 Marks)
- Feasibility and Scalability (10 Marks)
- Data Usage (10 Marks)
- Ethics and Security Considerations (10 Marks)
- User Experience and Design (10 Marks)
- Presentation (5 Marks)

GOOD LUCK!

- Have fun!
- Take photos!
- Ask questions!
  - To us, to each other and go between R209 and R110!
  - To keep things easy, can we have Team 1 – 6 in R110
  - And Team 7 – 12 in R209
  - Thanks! :)
